Sinjimoru's Sinji Pouch is the world's first Stick-On Wallet!

---

This is awesome. I previously had the CM4 case but they didn't make one for the iPhone 6 Plus yet. I got the regular apple case, stuck this bad boy on it, and it's awesome. My wife got one too and loves it. It holds lots of cards and doesn't get stretched out like leather. Put it towards the top of the phone, not the bottom, so that when you lay the phone on its back it tilts down towards you rather than away from you. Really happy with it.

---

I feel like an idiot for not buying this first before purchasing multiple cases that integrated a credit card holder in to it. No case is the jack of all trades, and this Stick-On Wallet solves that problem. My wife has an otter box because she's chasing around two kids all day or at the gym or running errands quickly, so protecting the phone is priority #1. And now she won't be forgetting her ID or her credit cards with this. Me, I travel 5-6x per month and I need an extended battery most times. But I hate fumbling for ID and credit card at the airport, and then a hotel, and then a rental car counter. But I always have my phone in my pocket. Problem solved. Buy 3 of these like I did. iPhone and iPad have them stuck on. You never know. Reading the Kindle app at the pool, need your hotel key....

---

First, very important: Do not buy white color. I have been using this for over two weeks. Here are my observations: (1) With four cards, the elastic is pretty tight and in the past couple of weeks it never lost its elasticity (2) I put my company key card, metro card and credit cards. Love the convenience: I don't have to take my wallet out to enter my office or get on a train. (3) I am using this on the plastic bumper of my 6 Plus and the adhesive holds very strongly. (4) It is very light weight and hence doesn't feel heavy like other card/wallet cases. (5) As other reviewers mentioned, the white color get dirty pretty quickly - and - it becomes really ugly. (6) Note that when you have more cards, it is tricky to take the cards in the middle or back because all of them are at the same insertion depth. (7) iPhone will lose its overall look. This product is more for utility than aesthetics. See all 271 customer reviews...
